USPI Inline Filtration

Stationary Bag Filter Systems for Large Contaminants

DO YOU have an application or equipment that produces large contaminants? Do your OEM filters become useless in a matter of days or even minutes? Then consider a dedicated USPI 88 Bag Series filter system. Our Bag housings with either re-usable or throw away bags (ranging from 10 to 500 microns) filter out large contaminants, then oil passes through our depth filters to remove both water and small wear causing particulate.

An 88 Bag Series in-line, kidney-loop filtration unit coupled with our bags and depth style filter elements will meet your needs and provide you increased productivity with cost savings, whatever your large contaminant application. In addition, we offer a comprehensive oil monitoring and analysis program with personal service to ensure you get maximum life from your equipment, oils and filter elements.

88 Bag Series Units

- 88SB:** for Reservoirs ~10-120 gallons
- 88DB:** for Reservoirs ~ 60-360 gallons
- 88QB:** for Reservoirs ~120-720 gallons

88 Bag Series Specifications

- Chrome-Plated Steel Housing
- Rigid Steel Piping
- Flow Meter (sized to unit): 1-20 GPM
- Pressure Gauges to Monitor Element Pressures
- Oil Sampling Port
- 60 Mesh SS Y-Strainer
- Pump (sized to reservoir): .5 - 12 GPM
- Motor (sized to application): 1/4 - 1 HP
- Dimensions (for 88QB): 24-1/2"W x 65"H x 30-1/2"D
- Weight (varies by unit): ~215-300lbs.
- FILTER ELEMENTS SOLD SEPARATELY
