## USPI AFA-2 Filter Element

### Ultra-Fine Depth Filtration and Water Removal

US Petrolon's filtration equipment uses depth filter elements to increase equipment cleanliness levels. These filters utilize a patented non-channeling element design to improve filtration by forcing oil through a wound filter media, which allows US Petrolon filters to remove virtually all contaminants 1~3 microns and greater in the fluid.

US Petrolon's depth filter elements can be used with a host of equipment applications and lubrication fluids. In every application, depth filtration systems provide a rapid return on investment by reducing the amount of oil purchased, saving man hours changing oil and repairing equipment, increasing full flow filter life, removing moisture and extending equipment life.

#### Element Specifications

- Solid Steel Core
- SS Element Handle
- Rated up to 250F (AFA-2X up to 350F)
- Non-Channeling Design
- 50x Particulate Capacity of Comparable Spin-on Filter
- 5 Quart Free Water Capacity
- Weight: 9lbs.
