USPI Sample Probe

Accurate Oil Sampling to Extend Equipment & Fluid Life

TAKING an oil sample right the first time, saves money, avoids re-takes and establishes confidence in decisions made from oil analysis. Drawing hot fluid from an active circuit (up to 7500 psi) while equipment is running provides a well-mixed and representative fluid sample.

You can take a sample in seconds without any extra tools while avoiding dangerous burns during drain sampling.

Everyone benefits from a properly drawn oil sample. Accurate oil analysis looks into the piece of machinery and provides information needed to keep equipment operating smoothly. The USPI sample probe will contribute toward a proactive maintenance approach, which is the goal and aim of USPI filtration and fluids.

Probe Specifications

- Passed ISO 8434-5 (1 million cycles @7800psi)
- Patented Face Sealing Method
- Nitrile Seals (-40F to 220F)
